internet/Book cover-Doing Social Science Research: a Guidebook

Research aptitude is one of the essential qualities that should be imparted through higher education. It not only meant to developing future scientists, but also to inculcate scientific and investigatory temperament among talented youth. Incorporating this noble vision of education research training is now an integral part of present day curriculum, which starts from lower primary classes, especially through projects.

However, scientific research training is not seriously undertaken by most of the institutions in India. The lapses in research in our country may be attributed to the lack of this basic training.

This workshop is aimed at training UG/PG students to do their final year/semester projects through proper research methodology. It also aims at generating future social scientists by imparting scientific skills.

OBJECTIVES

- Developing Scientific and Critical Thinking
- Enhancing Multi- and Interdisciplinary Cognitive Skills
